Simultaneous Measurement of Multiple Systems

Since all units are mutually isolated, the primary and secondary sides of devices or disparate power lines can be measured simultaneously. Simultaneous measurement of single phase 6 wire or 3 phase 2 wire systems which previously required multiple units, can now be handled with one. What's more, measurements of all devices can be taken at the same instant, providing a powerful tool for integrated, all-round device assessment.

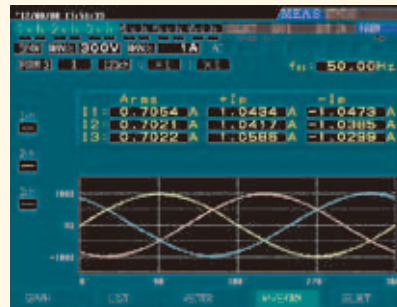

Graph Display of Harmonics

Voltage, current and power can be analyzed and displayed by bargraphs of harmonic amplitude, content and phase angle. Voltage, current and power can be displayed simultaneously for a single channel, or a single parameter can be displayed simultaneously for each of three channels.

Waveform Display

The waveform display shows one cycle of the voltage and current waveforms. RMS and peak values can be displayed along with voltage and current waveforms, or voltage and current waveforms for up to three channels can be displayed at the same time.

List Display of Harmonics

The harmonic list display shows the amplitude, proportion, phase angle and distortion for each harmonic of voltage, current and power. Displaying only proportion, or two parameters simultaneously, such as amplitude and phase angle, is selectable.

Vector Display of Harmonics

The harmonic vector display shows the voltage, current and phase angle for each harmonic, making clear the voltage-current phase relationship.

Flicker Measurement Display

Displays data during measurement in real-time. Display can also be switched to D measurement and "Pst" value.

Monitor Display

The relative "d" voltage change $\Delta V/V$ and the instantaneous flicker value "S(t)" can be displayed in a time series, so past variations are clearly displayed.

Assured Accuracy Range for Input Frequency of the 9600

9601 and 9602 each have assured ranges for input frequency.

Note 1: Assured accuracy ranges for different response settings are as follows: FAST (0.1 sec) to DC and greater than 50 Hz, MID (0.8 sec) to DC and greater than 10 Hz, SLOW (5.0 sec) to DC or greater than 0.5 Hz

Note 2: Assured accuracy ranges for combined mode measurement are 10 Hz or greater for the AC mode, and DC only for the AC+DC mode or DC mode.

Calculation algorithm

(Indicated only for single phase, 2 wire and 3 phase, 3 wire (3V3A). Two additional calculation algorithms can be selected for apparent/reactive power)

	Voltage	Current	Active power	Apparent power	Reactive power	Power factor	Phase
1φ2W	U_1	I_1	P_1	$S_1 = U_1 \times I_1$	$Q_1 = s_1 \sqrt{(U_1 I_1)^2 - P_1^2}$	$\lambda_1 = s_1 P_1 / S_1$	$\phi_1 = s_1 \cos^{-1} \lambda_1 $
SUM 3φ3W (3V3A)	$U_{1,2,3} = \frac{U_1 + U_2 + U_3}{3}$	$I_{1,2,3} = \frac{I_1 + I_2 + I_3}{3}$	$P_{1,2,3} = P_1 + P_2$	$S_{1,2,3} = \frac{\sqrt{3}}{3} (U_1 I_1 + U_2 I_2 + U_3 I_3)$	$Q_{1,2,3} = \frac{s_1 \sqrt{(U_1 I_1)^2 - P_1^2} + s_2 \sqrt{(U_2 I_2)^2 - P_2^2}}{3}$	$\lambda_{1,2,3} = s_u \left \frac{P_{1,2,3}}{S_{1,2,3}} \right $	$\phi_{1,2,3} = s_u \cos^{-1} \lambda_{1,2,3} $

Note 1: The above calculation algorithm is for a single phase, 2 wire input to ch 1, and 3 phase, 3 wire input to ch 1/2/3 (3 voltage, 3 current).

Note 2: The "s" before each power factor or phase operation indicates the lead or lag of current phase in relation to voltage. The "-" sign means current phase leads voltage and when there is no symbol, it lags. "su" is "-" when the sum of reactive power is negative and "+" (but unsigned) when it is positive.
